- *0 Selects* indicates the default state when the system is powered on.
- *1 Selects* indicates the state when the system is powered off.

### System Diagnostics

When the system is off, it is due to overheating. The diagnostic procedure to verify that all equipment is functioning properly is as follows:

1. **Power Up**: Ensure that the system is connected to the power source.
2. **Check Cables**: Ensure that all cables are securely connected to the system.
3. **Check Connection**: Ensure that all connections are properly seated.
4. **Check Power Supply**: Ensure that the power supply is functioning correctly.
5. **Check Overheating**: Ensure that the system is not overheating.
6. **Check System**: Ensure that the system is not malfunctioning.

Press the **Reset** button to reset the system to normal operation.
