Append.:

- Maintenance Schedule WP07050618
Introduction

These operating instructions are for driver, user and maintenance staff of a/c-unit.

**It contents:**
- Operating instructions
- Safety information △
- Maintenance Schedule

Each person who is involved in handling the a/c-unit has to read and make use of these operating instructions, before first start-up and after that regularly, e.g.:

- Operation including troubleshooting, maintenance and disposal of fuels and auxiliaries agency.
- Servicing (maintenance, inspection, repair)
- Transport

This makes the user’s training easier and troubles by improper handling will be avoided. Compliance with the operating instruction by the maintenance personnel increases the reliability during operation, increases the life time and reduces expenses for repair and loss of time.

- Add national orders to this operating instruction for accident prevention and environment protection.
- The Operating instruction is a part of your a/c-unit.
- Always have a copy at hand in.

You will certainly understand that we will not recognize any warranty claims due to improper handling, inadequate maintenance, applications that do not correspond to the determined use, utilization of not admitted fuels, or the non-observance of security prescriptions.

KONVEKTA will annul without prenotice all obligations concerning guarantee, service contracts etc. regardless if granted by KONVEKTA or its distributors in case other than original KONVEKTA spare parts or parts bought from KONVEKTA AG have been used for maintenance and repair.

This Operating instruction contains all necessary information to operate your air conditioner. In case you need more explanations please contact the next KONVEKTA service station.

[On our website www.konvekta.com in category >service< you will find a survey of contact details of all our service partners close to your location.]
Notes to the operating instruction

This Operating instruction is valid for the air conditioners type:

- KL60 /12V
- KL70T/24V
- KL80T/24V

When taking the unit into operation we recommend to add the following data. This will also be important for your orders of spare parts, and in case of warranty.

| Serial number of the a/c unit: ............................................ |
| Order No.: ........................................................................ |
| Year of construction: ...................................................... (MM/JJ) |
| Date of first operation: ...................................................... (TT/MM/JJ) |

The machine corresponds to the security prescriptions of the EC # 89/392/EWG i.d.F. 91/368/EWG and 93/44/EWG.

Due to the fact that scope of supply depends on the order, equipment of your product may differ in some parts of description. In case your product is equipped with details not shown or described in the operating instruction, your KONVEKTA -Service-Station will always be at disposal for informing you about correct operation.

In the course of further developments we reserve the right to technical modifications without prenotice. Guarantee and liability conditions of KONVEKTA AG’s general business conditions are not enlarged by the above notes. Indications and photos should neither be copied and circulated nor used for competitor’s purposes. All rights according to the copyright remain expressly reserved.

Manufacturer: KONVEKTA AG, P.O. Box 2280, D-34607 Schwalmstadt

2. **Intended use**

The KONVEKTA air conditioning unit is an air conditioning system that works with the ozone friendly refrigerant R 134a and which creates a pleasant and individually adjustable room temperature by means of forced convection. The determined use includes also the observance of the operating instructions as well as the proof of regular inspections.

3. **General information a/c unit**

**Attention in case of roof top a/c units:**

----- Never switch on the a/c unit during car-wash!

- The a/c unit is operational with running engine only.
- At cooling operation the humidity inside the vehicle is decreased, which avoids steamed up windows.
- The a/c unit works most effectively with windows and doors shut. If, however, the interior of the standing vehicle has been heated up severely by exposure to sunlight, short-time opening of windows and doors may accelerate the cooling down process.
- At high outside temperature and humidity condensate might drip off the evaporator and make a puddle under the vehicle. This is quite normal and no sign for a leakage.
- The filter in the return air grid (optional) retains pollution. If the external air is contaminated with gas switch over to return air operation. The filter should be cleaned or replaced respectively on a regular basis so that the capacity of the a/c unit is not affected.
- **If you think that the a/c unit is damaged, switch it off immediately.** To avoid further damage have it check at a KONVEKTA Service Station. Only after that you can take unit into operation.

3.1. **Operating Conditions**

**NOTE:**

KONVEKTA uses components made of copper and aluminium, which last a whole unit lifetime under normal environmental conditions. Should the units be operated under aggressive environmental conditions, i.e. air containing salt-, phosphate- or ammoniac extremely, a corrosion of the cupper- and aluminium components can not be ruled out. The cupper- and aluminium components of the KONVEKTA systems are not suitable for such extreme application conditions. We indicate emphatically, that corrosion is not subject to warranties for defects. KONVEKTA does not take over any warranties for defect, neither for corrosion nor for consequential damage resulting there from, nor for damages caused by cleaning the systems with highly compressed or corrosion advancing substances.

3.2. **Operating elements**

The air conditioning control **KS60** is a control and regulation device for air conditioners in modern buses. The bus driver is relieved from all questions of an optimum air conditioning in the passengers’ compartment by a simple and clear handling. All functions of the a/c unit are adjustable by different key-buttons. Every button has an indicating lamp, called LED used as a control function of the buttons or in case of operating. LED is shining red if button is pressed or if unit is in operation. Control board KS60 is connected onto the original dash board lightning of the vehicle. This means that in case of running vehicle lamp, night lightning of control board (LED green) is also activated.

**Auto-test**

If voltage supply to unit is interrupted, unit starts a self test immediately after reset. All in- and outlets are checked. After self-test, actual temperature can be read on display (if ignition is ON), or… if ignition is OFF an LED flashes on display.

**On our website** [www.konvekta.com](http://www.konvekta.com) in category >service< you will find a survey of contact details of all our service partners close to your location.
4. **Operation with control KS60**

⚠️ **Danger of accident!**
- Focussing your attention on the road traffic is of top priority
- Only operate your air conditioning unit when the traffic situation allows it
- Make sure you can clearly recognize and read all operation- and display-elements at any time
- Protect all displays against irritating sunglare and any other optical disturbances
- Please note that the control panel keys have not been designed for heavy stressing
- Excessive or fast pressing of the keys for adjusting the set temperature does not accelerate the cooling down process. It possibly damages the control panel and so affects the general performance of the airconditioning unit.

4.1. **Operation panel / function of the keys**

Control KS60/12V, Part no.: H11-005-401
4.2. Operation of a/c system

− Start vehicle engine (refer to orig. operating instruction of the vehicle).
− The air conditioner is activated by means of key [AC], *a/c automatic*, LED inside key button is indicated. Pressing key S5 again, air conditioner switched off. The blowers are regulated automatically.
− With key [â³] or [ô³] the required air volume can be adjusted manual.

⚠️ ATTENTION:
In case of trouble in the a/c cooling circuit the LED-display (key [AC] S5, see 5.3) is lighting up. Operation of the a/c system only after verification by qualified a KONVEKTA-Service-Station

4.3. Adjustment of temperature

If a/c-unit is operating, vehicle inside temperature can be adjust with key [â³] or [ô³], in a range of 59°F up to 82.4°F. In case of operating key (+) or (-), temperature can be increased or reduced. The actual temperature can be read on display.

4.4. Storing of functions

If ignition is turned off, the following data will be stored always:
- AUTO – function
- Desired temperature
5. Maintenance / Servicing

Please arrange regular dates for maintenance works and services with a KONVEKTA service station, as indicated in maintenance schedule bus no. WP07050618. On our website www.konvekta.com in category >service< you will find a survey of contact details of all our service partners close to your location.

- Only qualified staff is allowed to carry out these works! -

For general instructions on repair – and maintenance works please contact via email: TKD@konvekta.com

![Danger of accidents!]

Qualified staff in charge of installation and maintenance have to be trained in accordance with EN 378-Part 4 and must strictly follow the legal provisions. Any works or modifications at the air conditioner which are carried out improperly can lead to malfunction and so endanger operational reliability. We recommend having all works and modifications carried out at an authorized KONVEKTA Service Station.

Before carrying out any maintenance works at your air conditioning unit, carefully read the KONVEKTA safety provisions (TD00052A) in order to avoid any dangers and accidents!

5.1. Return air grid

Clean the return air grid in the passenger area monthly. In case of enormous dirt weekly.

**Important:**
- If the filter is soiled, the cooling performance of the air conditioner will decrease.
  - In case the a/c unit will be operated continuously with dirty filter, the evaporator blowers and cooling compressor will be damaged
- It is not allowed to operate the air conditioner without filter.
- If filter is defective, filter must replace!

5.2. Condenser coil

Always keep condenser coil fins clean. Severe soiling causes excess pressure within the a/c-unit system and it automatically stops working.

**Attention:** The condenser coil fins have to be cleaned with compressed air at least once a year, in case of severe soiling more often.
5.3. **Troubleshooting**

- Only qualified staff is allowed to carry out these works! -

<table>

6. **Warranty Conditions**

The current „General Warranty Conditions“ KONVEKTA AG“ will apply. A copy will be furnished by the warranty department. Please contact gwl@konvekta.com

7. **Adequate waste management**

After the phase of use the last proprietor is responsible for the adequate waste management. The environmental regulations in the exporting country must be observed.

The following list contains the most important regulating literature, valid for the Federal Rep. of Germany:
- Resolution for dangerous substances
- Law for waste circulation (KRW/AfgG))
- Resolution for the proofs of utilization and removal
- Criminal Code (StGB) 28th section „criminal acts against the environment" §326 - Environment jeopardizing waste management
- Law of chemicals § 27 - penal prescriptions
- Resolution for used oil
- Law of water balance
- Resolution for the waste management of old cars and the adaptation of road prescriptions
- Resolution (EWC) No.3093/94 for materials that affect the ozone layer
- Resolution to prohibit certain ozone destroying halogen hydrocarbons.

The used refrigerant endangers the environment. When dealing with refrigerants the existing prescriptions and regulations are to be followed. **Only skilled personnel is allowed to carry out these works!**

Water endangering substances - acc. to §§19g-19l - are solid, liquid, and gaseous substances. e.g.: mineral and tar oils (cooling oils), halogen containing organic combinations (refrigerants)
